DETAILED ACTION

1. The instant application having Application No. 11/076,652 has a total of 8 claims pending in the application; there is 1 independent claims and 7 dependent claims, all of which are ready for examination by the examiner.

Oath/Declaration

2. The applicant's oath/declaration has been reviewed by the examiner and is found to conform to the requirements prescribed in 37 C.F.R. 1.63.

Drawings

3. The applicant's drawings submitted are acceptable for examination purposes.

Information Disclosure Statement

4. As required by M.P.E.P. 609(C), the applicant's submissions of the Information Disclosure Statements dated October 14, 2005, August 13, 2007 and December 20, 2007 are acknowledged by the examiner and the cited references have been considered in the examination of the claims now pending. As required by M.P.E.P 609 C(2), a copy of the PTOL-1449 initialed and dated by the examiner is attached to the instant office action.

11/076,652 Art Unit: 2146

Claim Rejections - 35 USC § 112

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "a second network interface coupled to the processor," but it is not clear how this element is used in or incorporated into the system. Appropriate clarification and description are required.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cooper (U.S. Patent No. 7,272,646).

Regarding claims 1 and 2, Cooper teaches a system for detecting aberrant network behavior by clients of a network access gateway, comprising a processor; a first network interface coupled to the processor; a storage media accessible by the processor. See generally Cooper at col. 7-8, System Overview. Cooper teaches that

the system may observe a network communication received at the first network interface and determine if the network communication is aberrant. See Cooper at col. 3, lines 46-55 ("The monitoring system listens on a network, logs events, and takes action, all in accordance with a rule based system-wide policy"). Cooper further teaches, if the network communication is determined to be aberrant, record the event to storage and perform notifications to a registered entity. See Cooper at col. 4, paragraph 3 ("The event's disposition determines whether the event is allowed, i.e. conforms to the specified policy or disallowed and what action, if any, should be taken by a system monitor in response to that event. Possible actions include, for example, logging the information into a database, notifying a human operator, and disrupting the offending network traffic.").

Although Cooper only explicitly teaches monitoring one network interface, it would be obvious to one of ordinary skill to monitory a second network interface. There is always a general motivation to extend a device operable in a single domain so that the device may operate in a plurality of domains.

Regarding claim 3, Cooper teaches that the computer instructions are further operable to observe the network communication regardless of protocol. See Cooper at col. 19, lines 2-11 ("The preferred embodiment provides a streams-based network monitor that can be run in a standalone mode independent of the policy monitor. In this way it can be used to provide a detailed, streams-based view of the network traffic, or a subset thereof. For example, run in standalone mode is desirable when a particular

protocol is not supported natively by the policy monitor and an end user desires to see raw data to gain an understanding of what is going on").

Regarding claims 4 and 5, Cooper teaches associating the client with an identifier. See Cooper at col. 6, Table A ("Credential: An identification of the initiator or target of a protocol event at a particular protocol level. For lower-level protocols, credentials are, for example, IP addresses or UDP port numbers").

Regarding claims 6 and 7, Cooper teaches that the system may receive at least one configuration adjustment from an internal or external source of the system. See Cooper at col. 8, Policy Generator.

9. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Cooper in view of Porras (U.S. Patent No. 6,708,212).

Regarding claim 8, Porras teaches that the system may determine if a client's network communication is aberrant by means of communication with a suspicion accumulator. See Poras, Abstract ("A method of network surveillance includes receiving network packets handled by a network entity and building at least one long-term and a least one short-term statistical profile from a measure of the network packets that monitors data transfers, errors, or network connections. A comparison of the statistical profiles is used to determine whether the difference between the statistical profiles indicates suspicious network activity"). It would have been obvious to one of ordinary skill in the art to use Porras' technique in Cooper's system because both disclosures relate to network monitoring and threat/problem detection.

Conclusion

- 10. Please see the included *Notice of References Cited* for additional prior art considered pertinent to applicant's disclosure but not explicitly relied upon in this action.
- 11. The examiner requests, in response to this Office action, support be shown for language added to any original claims on amendment and any new claims. That is, indicate support for newly added claim language by specifically pointing to page(s) and line no(s) in the specification and/or drawing figure(s). This will assist the examiner in prosecuting the application.
- 12. When responding to this office action, Applicant is advised to clearly point out the patentable novelty which he or she thinks the claims present, in view of the state of the art disclosed by the references cited or the objections made. He or she must also show how the amendments avoid such references or objections See 37 CFR 1.111(c).
- 13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Willow Noonan whose telephone number is (571) 270-1322. The examiner can normally be reached on Monday through Friday, 7:30 AM-5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Pwu can be reached on (571) 272-6798. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
